

Thank you for subscribing to EcoChoiceSM, a new renewable electricity program offered by San Diego Gas & Electric[®] (SDG&E[®]) to both residential and business customers. The Historic Product Content Label shows the type of renewable energy sold to EcoChoice customers in the prior program year.

In 2016, EcoChoice renewables consisted of the following resource types:

Green-e Energy Certified New Renewables in the EcoChoice Program ¹		Generation Location
Solar	100%	Southern California (interim pool ²)
Total Green-e Energy Certified New Renewables	100%	

1. New Renewables come from generation facilities that first began commercial operation within the past 15 years.

2. The Interim Pool is a mix of existing solar resources used to provide renewable energy until new solar generation procured specifically for EcoChoice customers begins operation. The Interim Pool consists of solar generation located in San Diego County (five facilities, 20.8 MW), Imperial County (two facilities, 40 MW), Kern County (one facility, 20 MW), and San Bernardino County (one facility, 18.5 MW). All nine Interim Pool facilities began operation January 2013 or later.

For comparison, the current average mix of resources supplying SDG&E customers includes: Biomass and Bio-waste (1%), Solar (21%), Wind (21%), Natural Gas (42%), and Other (15%). This resource mix was reported in SDG&E's 2016 Power Content Label. Renewables contained in SDG&E's default resource mix are not Green-e Energy certified.

The average residential customer served by SDG&E uses 486 kWh per month. Source: SDG&E FERC Form 1, 2014
